

Modern Data Company to Present, Demonstrate at North America AI & Big Data Expo

Modern leaders will discuss data-led intelligent decision making and demonstrate unique decision ops platform

PALO ALTO, Calif. – September 29, 2022 – [The Modern Data Company](#) created the world’s first data operating system, DataOS, to simplify and operationalize complex data infrastructures and enable enterprises to quickly transform to a data-centric architecture instead of being product or tool centric. Modern will play a lead role in the [North America AI & Big Data Expo](#), held October 5-6 in Santa Clara, California, including thought leadership discussions exploring the AI and big data ecosystem, innovations and solutions.

Ash Damle, Modern’s Head of AI and Data Science, will give a keynote on DataOS addressing how DataOS is helping data scientists and engineers work faster, better and easier. The CEO of Modern, Srujan Akula, will be on a panel with other notable thought leaders to discuss data-led intelligent decision making. In addition, the company will host an information booth at the expo with live demos of DataOS.

“This will be the first time we are presenting how DataOS increases productivity of data science teams by taking care of the data engineering complexity,” Akula said. “We will demonstrate how DataOS is driving transformational change for our customers in weeks by dramatically simplifying data.”

Damle has built a career and reputation as a technologist and data scientist passionate about applying big data to health and life. Over the past 25 years, he has worked with leading institutions and organizations to build AI technologies, and he has founded multiple startups focused on health technology.

More event and registration information can be found online at <https://www.ai-expo.net/northamerica/>. The Modern Data Company will host live demos of DataOS at booth 66 during the expo.

About The Modern Data Company

[The Modern Data Company](#) is redefining data management with DataOS; the world’s first data operating system. DataOS dramatically simplifies data by decoupling an organization’s most important asset, data, from tools, pipelines and platforms. It puts data at the center of the enterprise and provides them the freedom of choice to pick platforms used to manage data and the tools to operationalize it. Modern is moving enterprises from tool, platform centric data architecture to a true data-centric architecture.
